

## Cosima Template tailor-made = optimal

**cosima**  
makes your business flow

Cosima was established in 1990 offering a new generation of administrative software. Our goal is to focus on your real value chains as well as on the resources to administer these. Cosima Template is developed to be adapted quickly and easily to improve the effectiveness of your business's resources and processes by tailor-making the system according to your needs.

### Do your employees have effective tools ?

Cosima Template comes in 4 variations : Trade, Industry, Insurance and Membership organisations. In addition, the system can be extended with additional modules like : Material Management (MPS), Salary and Personnel, Web-Portal and Web-Shop in an integrated total solution. Each user finds all customer information in dialogs which give an overview over all interactions and customer history, together with current status. In addition, the customer's contracts with your business are shown, along with all active value chains.

Cosima has carried out over 100 software installations. Our references are your guaranty.

**Cosima Template is the market's most flexible total-solution. Based on our standard version, we can tailor-make your own solution**

### Template

**Common for todays companies is the increased competition and sinking revenues. This demands that all data on "everything" be visible for everyone, which results in higher productivity. Employees need fast access to important information.**

### Challenge

Most businesses have important information spread around in various sub-systems. It therefore takes time to locate customer information or to enquire on orders. Is the order delivered, or ordered and when will the customer receive his item ?

### Solution

Cosima Template will give you all the information on a customer in an overview window, tailor-made for your particular branch of business. Using the customer's connection to your value-chain, all details can be shown, as well as a transaction history.

This means that the individual clerk knows exactly how each individual customer should be handled, and so give the service the customer deserves. Perhaps you have a special offer which suits him.

### Contact Us

If you make contact with us today, we can promise that you will not regret it. We believe our solution can measure up to or surpass any other. Ring us on **67 56 63 30** for a no-obligation talk.

### Why chose Cosima Template ?

Your business is unique and you have a grip on the market by having a competitive advantage. But, and its always a but, you realise that today's software solution limits and reduces future growth and success. Perhaps one of your issues is the reduced access to online information due to data being spread around in several data sources. A typical situation is to have your clients stored in several databases.

Cosima Template is optimised for businesses with ambitions of high growth and which do not want to encounter bottlenecks when, for instance, the number of orders is doubled or you begin exporting, with new requirements on currencies etc.

### Based on open IT standards !

Choose your technology :

\* Windows-version and/or Internet

\* Database: SQL Server, Sybase, Oracle, Informix, DB2, ODBC ...

### What is a Template-System ?

Our clients realise the importance of their core business system. In several situations, most off-the-shelf software needs to be adapted to match new, changing markets. A template is 70-90% complete in regard to its capability of fully matching all client's demands. This is especially true for most market leaders, as they have internally and externally established competitive edges which are very important for their success. With our technology and skills, we can adapt our ERP software in hours, whereas our competitors would use days.
